

Goldendict

Download

Download the program from <https://github.com/xiaoyifang/goldendict-ng>,

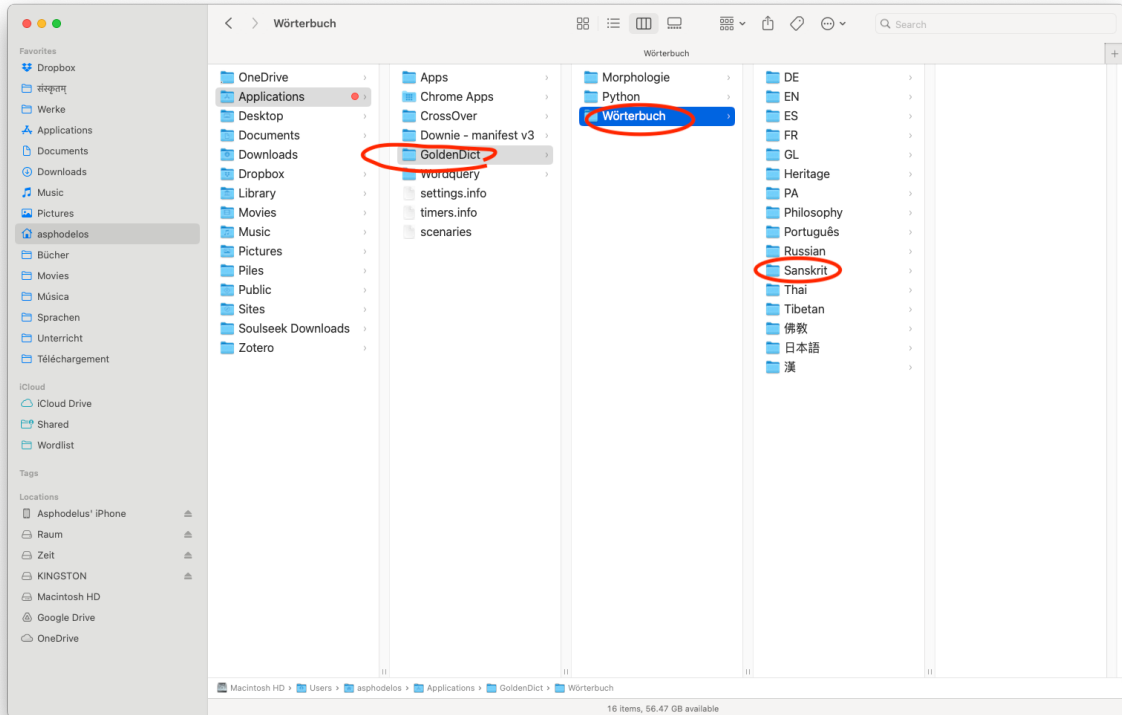

and the Sanskrit dictionaries from: <https://www.dropbox.com/scl/fo/idjnbdryh806twhg9mzzr/h?rlkey=qay44hw98qh2bozlwz6k8ox9&dl=0>,

<https://xiaoyifang.github.io/goldendict-ng/> is a Wiki site of the program created by the maintainer. You may go there to look for answer or solution.

How to set it up and organise:

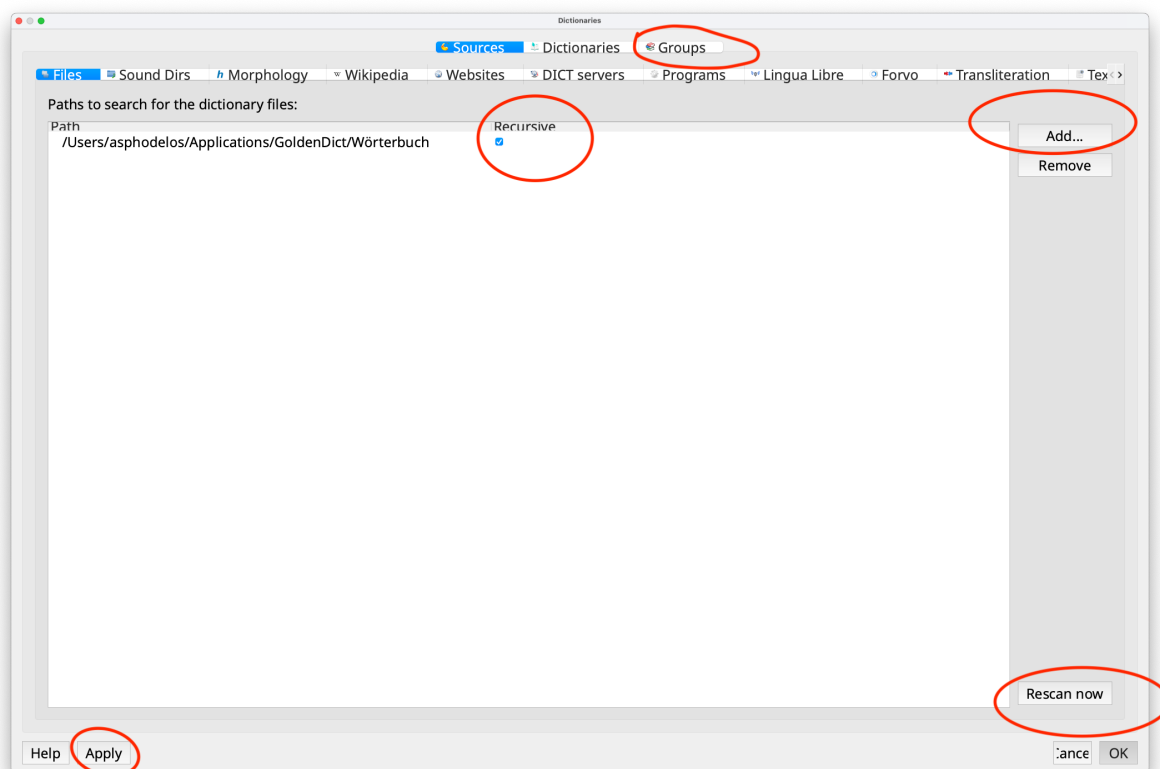

Install the downloaded program on your platform.

Put the dictionary files somewhere in your hard-disk:

Add dictionaries into GoldenDict

In Goldendict, go to "Edit" > "Dictionaries", in the pop-up panel, "add", choose the folder where you store all the dictionary files ["Recursive" means that the subfolders under the specified folder are included, so that you can put files for different language in different subfolders]. When Goldendict finishes scanning, click "Apply", or go to "Groups" if you wish to make different groups for different languages.

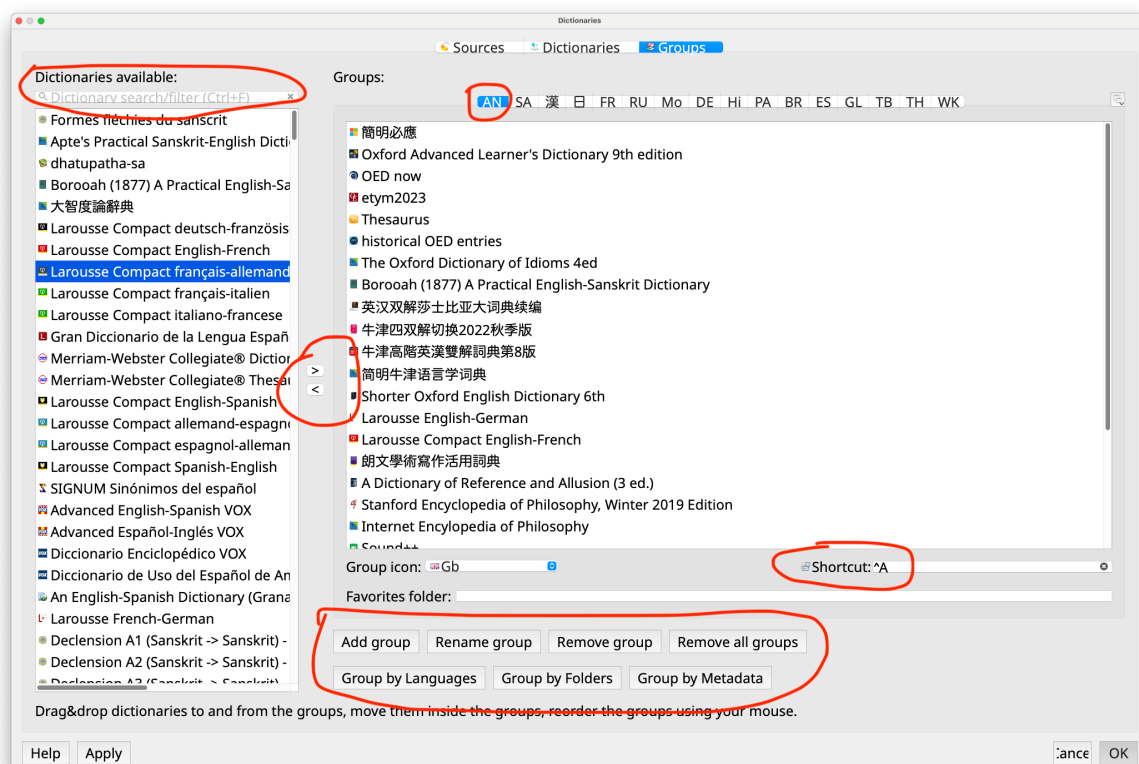

Arrange the language groups

In "Groups", ">" and "<" means add or remove the selected dictionary on the left to or fro the specific language group on the right.

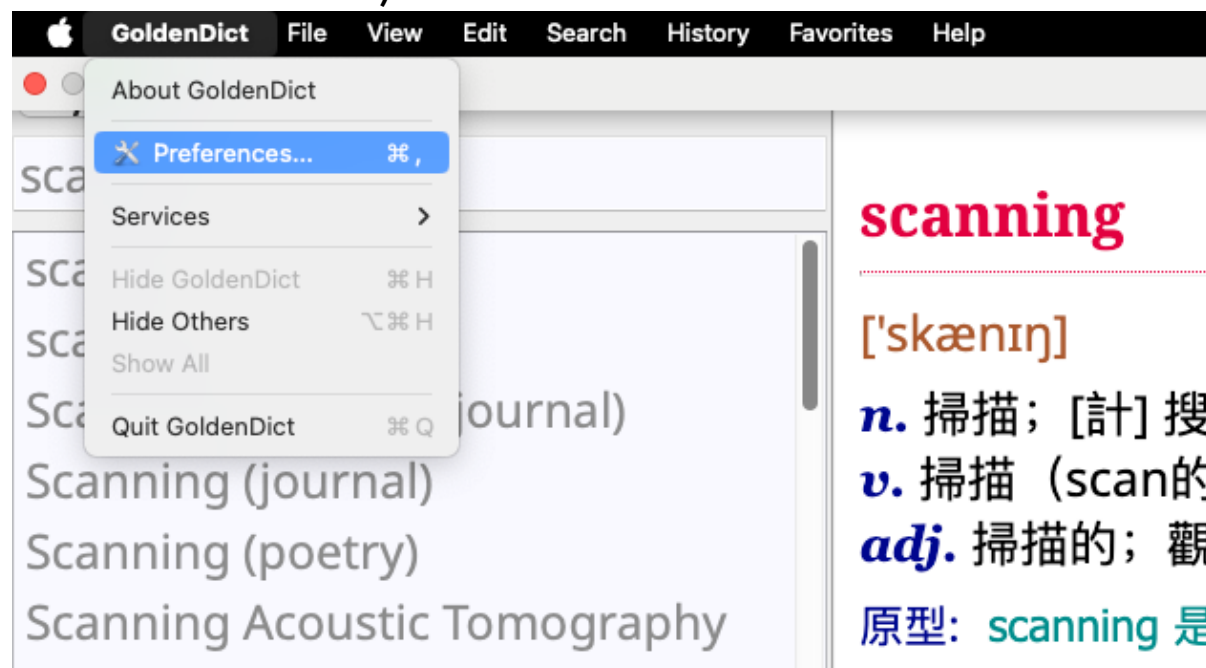

If there are a lot of dictionaries installed, search by name in the left-upper search box.

You can add new groups and set shortcut used on the main window.

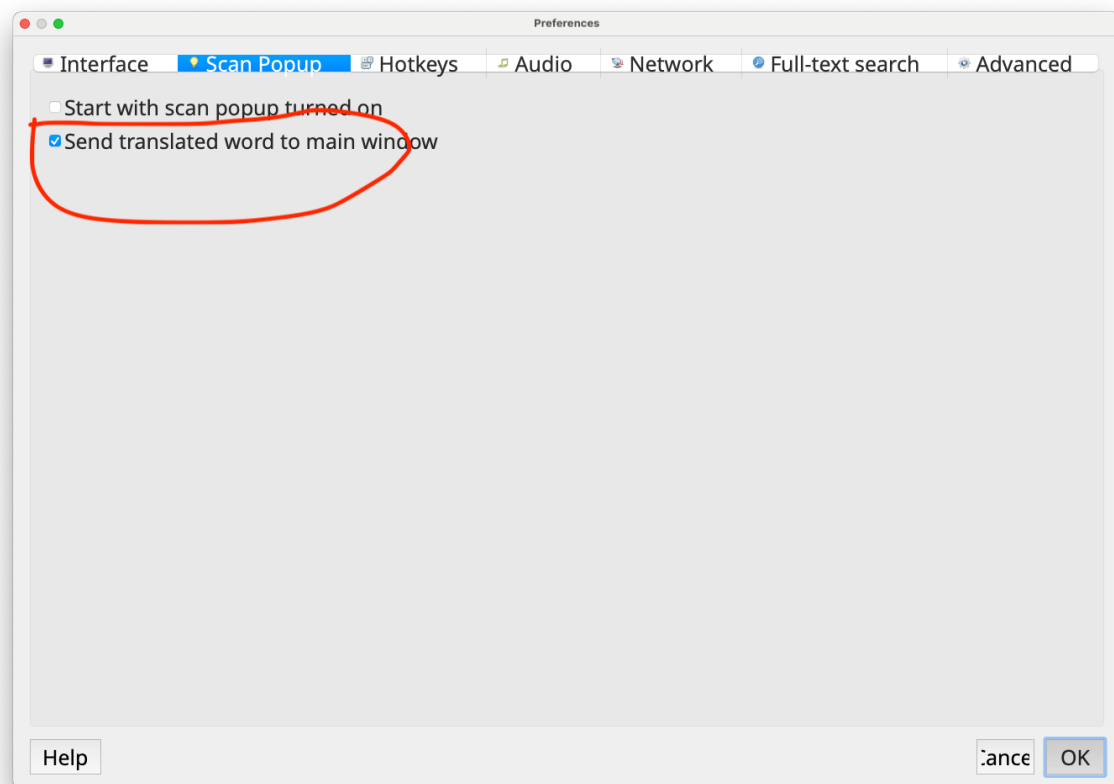

Preference

Go to "Preference"(or the equivalent should you use Windows or Linux)

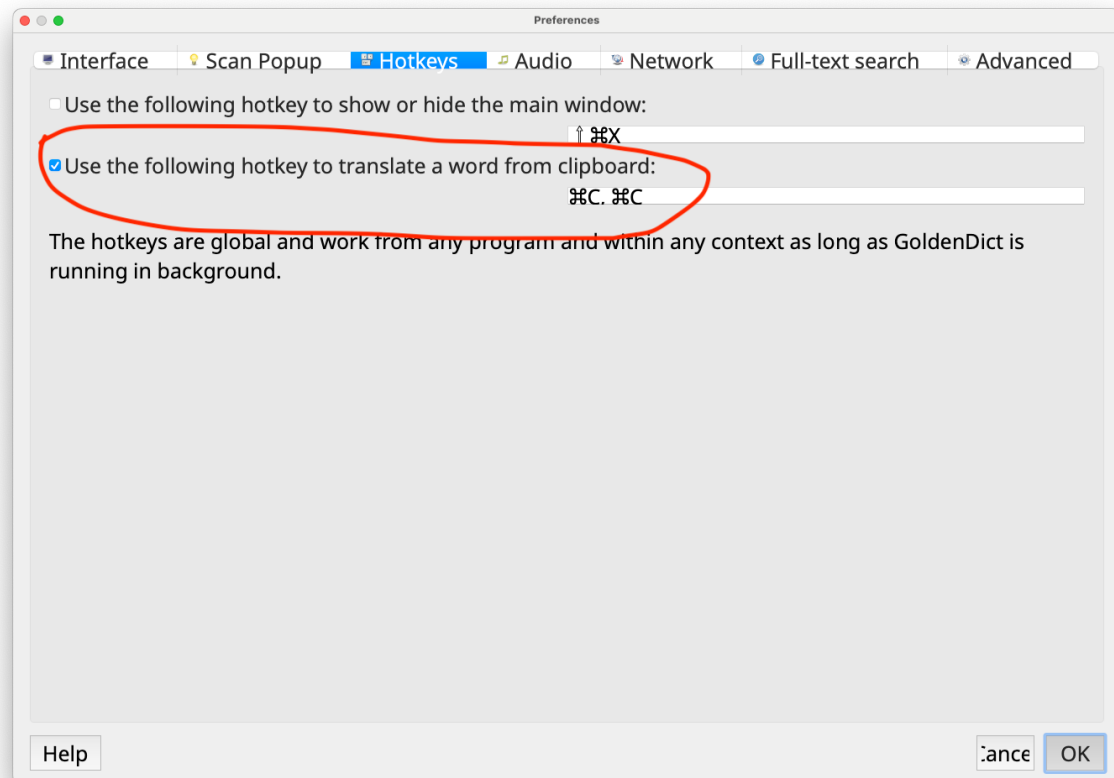

Check the option below, which makes looking up trouble-free from apps set in full screen in macOS.

The combination key of looking up

Here comes the best of GoldenDict:

Set the combination key as "command+C+C", or "control+C+C" (press "c" twice while pressing down "command" or "control" key on macOS or Windows respectively), then GoldenDict will return the explanations from the dictionaries in the current Group.

You may start to use it now. For more functionalities, you can go through "Preference" and check its "Help" menu and the Wiki site above.

Have fun!

This is how it looks to me:
